

HisabDo

Day 10 — Bug Reports

Defects found while executing the HisabDo Mobile & Website test cases

Execution Date: 17-Aug-2026

Track: Software Quality Assurance | Capstone — Day 10

Bug Reports

5 defect(s) found during execution. BUG-001 and BUG-002 are fully documented and share the same underlying pattern — deleted records are not persisted as deleted after a logout/login cycle. BUG-003 through BUG-005 are marked Fail in the source test cases but lack a recorded actual-result description; they are flagged "Needs Detail" pending re-testing. Each report's Screenshot/Video field points to a separate placeholder image file provided alongside this document — replace it with the real screenshot or recording before submitting.

Linked Test Case	MOB-TC-013
Module	Customer Management
Application	Mobile

Steps to Reproduce	1. Log in to the HisabDo mobile app. 2. Navigate to Customers. 3. Select an existing customer. 4. Tap Delete and confirm the deletion. 5. Verify the customer is removed from the customer list. 6. Log out of the account.

BUG-001 — Deleted transaction reappears after logout and login

Linked Test Case	MOB-TC-012
Module	Transaction Management
Application	Mobile
Steps to Reproduce	1. Log in to the HisabDo mobile app. 2. Navigate to Transactions. 3. Select an existing transaction. 4. Tap Delete and confirm the deletion. 5. Verify the transaction is removed from the transaction list. 6. Log out of the account. 7. Log in again using the same account. 8. Navigate to Transactions and check whether the deleted transaction is displayed.
Expected Result	The deleted transaction should remain deleted and should not reappear after logging out and logging back into the same account.
Actual Result	The transaction was deleted successfully and disappeared from the list. However, after logging out and logging back in, the deleted transaction reappeared in the transaction list.
Severity	High
Priority	High
Environment	HisabDo Mobile App — device/OS and build version not specified in source notes; please confirm and update before filing in a tracker.

BUG-002 — Deleted customer reappears after logout and login

	7. Log in again using the same account. 8. Navigate to Customers and check whether the deleted customer is displayed.
Expected Result	The deleted customer should remain deleted and should not reappear after logging out and logging back into the same account.
Actual Result	The customer was deleted successfully and disappeared from the list. However, after logging out and logging back in, the deleted customer reappeared in the customer list.

BUG-003 — [NEEDS DETAIL] Failure when internet connection is unavailable

Linked Test Case	MOB-TC-018
Module	Error Handling
Application	Mobile
Steps to Reproduce	1. Open HisabDo mobile application. 2. Log in with a valid account while the internet connection is available. 3. Turn off Wi-Fi/mobile data. 4. Navigate to a feature that requires an internet connection, such as Transactions or Customers. 5. Try to load or perform an operation. 6. Observe the application response.
Expected Result	Application should handle the network failure properly by displaying an appropriate error/offline message. The application should not crash or become unresponsive.
Actual Result	NOT RECORDED. The source test case document marks this scenario as Fail, but no description of what actually happened (e.g., crash, wrong message, freeze) was written down. A tester needs to re-run this case and record the specific actual behavior before this can be filed in a tracker.
Severity	Unconfirmed
Priority	High
Environment	HisabDo Mobile App — device/OS and build version not specified in source notes.

Status	Needs Detail
Reported By	QA Trainee

BUG-004 — [NEEDS DETAIL] Add Customer form mishandles an extremely long customer name

Linked Test Case	MOB-TC-020
Module	Customer Management
Application	Mobile

Steps to Reproduce	1. Open HisabDo mobile application. 2. Navigate to Customers. 3. Tap Add Customer. 4. Enter an extremely long string in the Customer Name field. 5. Fill in other required fields with valid information. 6. Tap Save/Add Customer. 7. Observe the application behavior.
Expected Result	The application should properly restrict or handle the excessive input. It should not crash, freeze, or corrupt the customer information. If a character limit exists, an appropriate validation message should be displayed.
Actual Result	NOT RECORDED. The source test case document marks this scenario as Fail, but no description of what actually happened (e.g., crash, no limit enforced, data truncated/corrupted) was written down. A tester needs to re-run this case and record the specific actual behavior before this can be filed in a tracker.
Severity	Unconfirmed
Priority	Medium
Environment	HisabDo Mobile App — device/OS and build version not specified in source notes.

BUG-005 — [NEEDS DETAIL] Duplicate customer information not handled as expected

Linked Test Case	MOB-TC-021
Module	Customer Management
Application	Mobile
Steps to Reproduce	1. Open HisabDo mobile application. 2. Navigate to Customers. 3. Tap Add Customer. 4. Enter valid customer information. 5. Save the customer. 6. Open Add Customer again. 7. Enter the same customer information. 8. Tap Save/Add Customer. 9. Observe the result.
Expected Result	System should handle duplicate customer information according to its business rules and provide appropriate feedback. If duplicate customers are not allowed, the system should prevent the

	duplicate entry and display an appropriate message.
--	---

Actual Result	NOT RECORDED. The source test case document marks this scenario as Fail, but no description of what actually happened (e.g., silent duplicate created, no validation message, app error) was written down. A tester needs to re-run this case and record the specific actual behavior before this can be filed in a tracker.
Severity	Unconfirmed
Priority	Medium
Environment	HisabDo Mobile App — device/OS and build version not specified in source notes.
