

Test Case ID	Module	Test Scenario	Preconditions	Test Steps	Test Data	Expected Result	Actual Result	Status	Priority
HD-M-001	Onboarding	Verify first-time user can complete onboarding and select language & currency	App freshly installed, not yet configured	1. Launch HisabDo for the first time 2. Select preferred language (e.g., English) 3. Select preferred currency (e.g., PKR) 4. Tap Continue/Get Started	Language: English; Currency: PKR	Onboarding completes; app opens to the home/dashboard screen with selected language and currency applied		Not Executed	High
HD-M-002	Authentication	Verify user can set up and unlock app using PIN	App installed, onboarding complete, no PIN set yet	1. Go to Settings > Security 2. Enable PIN lock 3. Enter a 4-digit PIN twice to confirm 4. Close and reopen the app 5. Enter the PIN on the lock screen	PIN: 1234	PIN is saved; app requires PIN on relaunch; correct PIN unlocks the app successfully		Not Executed	High
HD-M-003	Authentication	Verify biometric (fingerprint) unlock works when enabled	Device has fingerprint enrolled; biometric lock enabled in app settings	1. Enable biometric lock in Settings > Security 2. Close the app fully 3. Reopen the app 4. Authenticate using enrolled fingerprint	Enrolled device fingerprint	App unlocks immediately after successful fingerprint scan; falls back to PIN after 3 failed attempts		Not Executed	High
HD-M-004	Customer Management	Verify user can add a new customer/party profile	User is logged in / app unlocked, on Home screen	1. Tap 'Add Customer' 2. Enter customer name and phone number 3. Tap Save	Name: Ali Traders; Phone: 03001234567	New customer profile is created and appears in the customer list with a zero opening balance		Not Executed	High
HD-M-005	Customer Management	Verify duplicate customer name is handled correctly	A customer named 'Ali Traders' already exists	1. Tap 'Add Customer' 2. Enter the same name 'Ali Traders' again 3. Tap Save	Name: Ali Traders (duplicate)	App either warns the user of a possible duplicate or allows it with a clear distinguishing detail (e.g., phone number); no data corruption occurs		Not Executed	Medium
HD-M-006	Transaction Entry	Verify user can record an udhar (credit given) entry for a customer	At least one customer profile exists	1. Open customer 'Ali Traders' 2. Tap 'Add Udhar / You Gave' 3. Enter amount and optional note 4. Tap Save	Amount: 5000 PKR; Note: 'Goods on credit'	Entry is added to the customer's ledger; customer's outstanding balance increases by 5000		Not Executed	High
HD-M-007	Transaction Entry	Verify user can record a payment received entry	Customer 'Ali Traders' has an outstanding balance of 5000	1. Open customer 'Ali Traders' 2. Tap 'Add Payment / You Got' 3. Enter amount 2000 4. Tap Save	Amount: 2000 PKR	Payment entry is added; customer's outstanding balance correctly reduces to 3000		Not Executed	High
HD-M-008	Transaction Entry	Verify amount field rejects invalid/non-numeric input	Add Udhar/Payment screen is open	1. Tap Amount field 2. Enter non-numeric characters (e.g., 'abc') 3. Attempt to Save	Amount: 'abc'	App prevents non-numeric entry or shows a validation error; entry is not saved		Not Executed	Medium
HD-M-009	Transaction Entry	Verify user can edit an existing transaction entry	A transaction entry already exists for a customer	1. Open the customer's transaction history 2. Tap an existing entry 3. Edit the amount 4. Tap Save	Original amount: 5000 -> Updated amount: 5500	Entry updates correctly; customer balance recalculates to reflect the new amount		Not Executed	Medium
HD-M-010	Transaction Entry	Verify user can delete a transaction entry	A transaction entry exists for a customer	1. Open the customer's transaction history 2. Long-press or swipe an entry 3. Tap Delete 4. Confirm deletion	Any existing entry	Entry is removed from history; customer balance recalculates correctly to exclude the deleted entry		Not Executed	Medium
HD-M-011	Transaction History	Verify transaction history displays entries in correct chronological order with running balance	Customer has at least 5 transactions (mix of udhar and payments)	1. Open the customer's profile 2. View Transaction History tab	5 mixed udhar/payment entries	Entries are listed in chronological order (newest or oldest first, per app design) with an accurate running balance shown after each entry		Not Executed	High
HD-M-012	Reports & Insights	Verify Reports screen shows accurate income, expense and balance summary	Multiple customers with a mix of udhar and payment entries exist	1. Navigate to Reports/Insights 2. Select 'This Month' filter 3. Review summary totals	Sum of all udhar and payment entries for current month	Displayed totals (total receivable, total payable, net balance) match the sum of the underlying transactions		Not Executed	High
HD-M-013	PDF Export	Verify user can export a customer ledger statement as PDF	Customer 'Ali Traders' has transaction history	1. Open customer 'Ali Traders' 2. Tap 'Export as PDF' 3. Choose Save or Share	Customer with 3+ transactions	A PDF is generated containing the customer's name, all transactions, and correct running balance; file can be opened/shared successfully		Not Executed	High
HD-M-014	Backup & Restore	Verify user can back up data and restore it successfully on the same device	App contains at least one customer with transactions	1. Go to Settings > Backup & Restore 2. Tap Backup and save the file 3. Delete a customer to change app state 4. Tap Restore and select the backup file	Backup file created in step 2	After restore, all original data (including the previously deleted customer) is fully recovered with no duplication or loss		Not Executed	High
HD-M-015	Calculator	Verify built-in calculator performs basic and percentage calculations correctly	App is open, calculator is accessible	1. Open built-in Calculator 2. Perform a basic calculation: 250 + 175 3. Perform a percentage calculation: 500 - 10%	250 + 175; 500 - 10%	Calculator returns 425 for the addition and 450 for the percentage calculation		Not Executed	Low

Test Case ID	Module	Test Scenario	Preconditions	Test Steps	Test Data	Expected Result	Actual Result	Status	Priority
HD-M-016	Voice Entry	Verify voice entry correctly captures a spoken transaction	Microphone permission granted; on Add Transaction screen	1. Tap the voice entry (microphone) icon 2. Speak a transaction, e.g., 'Received two thousand rupees from Ali' 3. Review the auto-filled fields 4. Save	Spoken phrase with amount and customer name	App transcribes the speech and pre-fills amount/customer/type fields accurately, or clearly flags fields it could not parse for manual correction		Not Executed	Medium
HD-M-017	Reminders	Verify user can send a payment reminder via WhatsApp for an outstanding balance	Customer has an outstanding balance and a valid phone number; WhatsApp installed on device	1. Open customer with outstanding balance 2. Tap 'Send Reminder' > WhatsApp 3. Confirm	Customer with balance 3000 and valid WhatsApp number	WhatsApp opens with a pre-filled message containing the customer's name and correct outstanding amount, addressed to the correct number		Not Executed	Medium
HD-M-018	Search	Verify search correctly finds a customer by partial name match	Multiple customers exist, including 'Ali Traders'	1. Tap Search icon 2. Type partial name 'Ali'	Search query: 'Ali'	All customers containing 'Ali' (e.g., 'Ali Traders') appear in results in real time as the user types		Not Executed	Medium
HD-M-019	Settings / Localization	Verify switching app language to Urdu applies RTL layout correctly across screens	App is running in English	1. Go to Settings > Language 2. Select Urdu 3. Navigate through Home, Customer, and Reports screens	Language: Urdu	All text switches to Urdu, layout mirrors to right-to-left correctly, and no text is cut off, overlapping, or left untranslated		Not Executed	Medium
HD-M-020	Offline Functionality	Verify all core features work with no internet connection	Device network (Wi-Fi and mobile data) turned off / Airplane mode enabled	1. Enable Airplane Mode 2. Add a new customer 3. Record an udhar entry 4. View Reports 5. Export a PDF	Airplane mode; standard test customer and transaction	All actions complete successfully without errors or network-related prompts, confirming true offline-first operation		Not Executed	High
