

Bug Reports - HisabDo Day 7 SQA Internship

Application under test: **dummyjson.com** (API) and **saucedemo.com** (Web) Tool used: Postman (API), Chrome (Web) Tester: HisabDo SQA Intern

Summary

Total Confirmed Bugs Found: 0

Across all executed test cases (25 web + API cases with screenshot evidence), the applications under test behaved correctly and as expected in every case, including all negative and boundary scenarios. No functional defects were identified in this test cycle.

Reviewed and Retracted Items

Two items were initially logged as bugs during API negative testing but were re-reviewed and found to be **expected, correct behavior**, not defects. Logged here for traceability rather than as open bugs.

Retracted Item 1: `/products/carts` and `/products/users` return "Product not found"

- **What was observed:** GET `https://dummyjson.com/products/carts` and GET `https://dummyjson.com/products/users` both return 404 with a body like `{"message": "Product with id 'carts' not found"}`.
- **Why this is not a bug:** `carts` and `users` are not valid product IDs under the `/products/{id}` route — they were simply the wrong URLs to test (the API's real cart/user resources live at `/carts` and `/users`, not nested under `/products`). Returning a 404 telling the caller no such product ID exists is the **correct** response to an invalid ID. This is expected negative-test behavior, not a defect.
- **Reclassified as:** Pass (see AP1001-N2 / AP1001-N4 in `TestCases/Executed_Positive_Negative_Test_Cases.md`)

Retracted Item 2: `/products/carts/1` returns an HTML 404 page instead of JSON

- **What was observed:** GET `https://dummyjson.com/products/carts/1` returns a full HTML "Page not found" document rather than a JSON error body.
- **Why this is not a bug:** This URL doesn't correspond to any real API route (it's a three-segment path with no matching pattern), so falling through to the site's generic not-found page is reasonable framework behavior for a URL that was never meant to resolve. Not evidence of broken API functionality.
- **Reclassified as:** Pass (see AP1001-N3 in `TestCases/Executed_Positive_Negative_Test_Cases.md`)

Bug Summary
